

kta Process Map - Proof of Work

Repository witness: vyakaranamlikhitam/kta/

This compact PDF records the completed exploratory phase for the Sanskrit kta process map. It proves the repository architecture and preserves a visible, inspectable artifact.

Implemented architecture:

- Preamble 1: complete Dhatupatha registry generated from source data
- Preamble 2: Paninian sutra registry sorted by sutra number
- Chapters 1-11: gana modules with local-to-global rule links
- Bar-Down decision map for affix, voice, it, nistha, sandhi, and audit gates
- Cross-cutting registries for sandhi, composition categories, and irregular forms
- Stable identifiers for roots, rules, local uses, and derivations

Status:

The architecture is usable and expandable. Individual derivations remain subject to philological audit; provisional entries are explicitly marked rather than silently verified.

Completion convention:

Every exploratory project deposits at least one compiled PDF under vyakaranamlikhitam/<project>/ as its final proof of work.
